REXTON

What Are Hearing Aids?

Hearing aids are electronic devices designed to amplify and improve sounds for people with hearing issues.

They typically consist of a microphone that picks up sound, an amplifier that makes the sound louder, and a speaker that transmits the amplified sound to the ear canal. These small, wearable devices are available in various styles and with different functionalities to cater to the specific needs and preferences of users.

6 Main Types of Hearing Aids:

Behind-the-Ear (BTE):

These versatile devices fit over the ear with a tube and earmold resting in the canal. Suitable for a wide range of hearing loss, BTEs offer power for severe loss and come with various features like directional microphones.

Receiver-in-Canal (RIC):

Similar to BTEs but with a smaller case, RICs place the receiver speaker directly in the ear canal for improved sound quality. Ideal for mild to moderate loss, they offer a discreet design and often Bluetooth connectivity.

Completely-in-Canal (CIC) & Invisible-in-Canal (IIC):

These tiny devices fit deep within the ear canal, offering the most inconspicuous option for mild to moderate hearing loss. However, their small size may limit power and features.

In-the-Ear (ITE):

Filling the entire ear bowl (full-shell) or a portion (half-shell), ITEs come in various sizes for most hearing loss levels. They offer good power and features but might be less comfortable or discreet than smaller options.

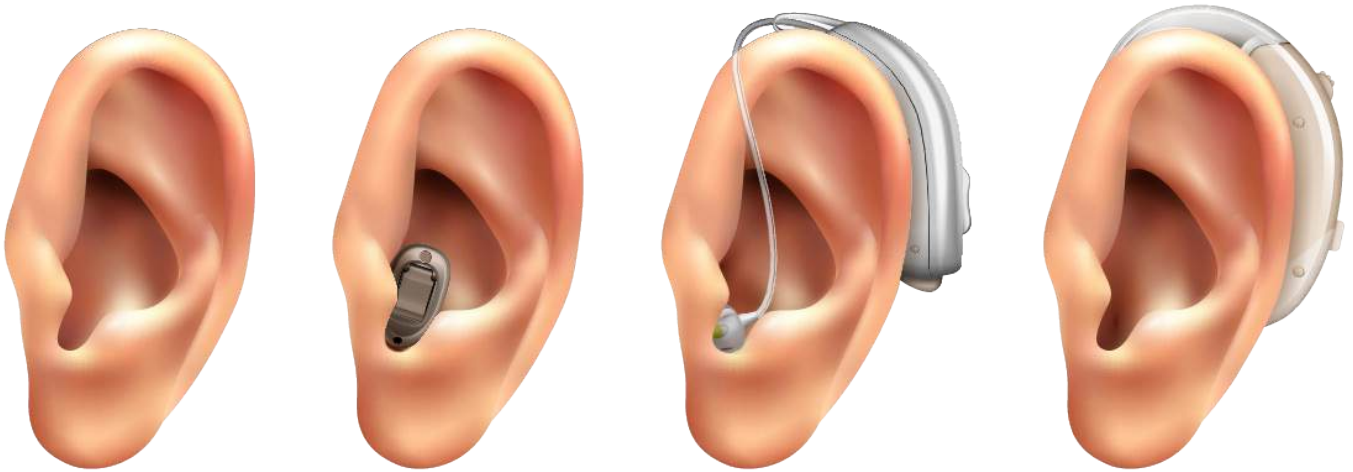

In-the-Canal (ITC):

Sitting within the ear canal but not as deep as CIC/IIC, ITCs are a good balance between size and discretion. They work well for mild to moderate hearing loss and offer some flexibility in features.

How Do Hearing Aids Help You Hear?

Hearing aids amplify sounds and improve speech clarity, allowing individuals with hearing loss to communicate more effectively and participate fully in daily activities and social interactions.

What is The Impact of Untreated Hearing issues?

Untreated hearing loss can have far-reaching consequences, including social isolation, decreased cognitive function, and reduced quality of life. Addressing hearing loss early with appropriate interventions can help mitigate these effects.

Our Audiologists are here to help you hear clear and live your life to the fullest!

Hearzap is your hearing care partner for life!

We offer comprehensive hearing care services for individuals of all ages, from infants to seniors. Whether addressing congenital hearing issues or age-related hearing loss, we are dedicated to promoting optimal hearing health throughout your life.
